VanRozgar — Implementation Plan (Updated)

Date: 2026-10-07

---

1. Overview

VanRozgar is a marketplace app, built on the Amazon buyer-seller model, for trading natural resources such as medicinal plants (jadibuti), honey, handicrafts, etc. (This list is only a starting point. Gram Sabhas and the VanRozgar team can add more natural resources and categories as the platform grows.) These resources are produced by forest-dependent Gram Sabhas (village forest councils) under Community Forest Rights (CFR).

Different Gram Sabhas are rich in different resources. For example, one Gram Sabha may have many medicinal plants, while another may have water resources. VanRozgar lets Gram Sabhas, landowners and outside buyers find, exchange and buy these resources in one place. It also creates paid delivery work for villagers who own a vehicle.

The platform earns the way Amazon does: by enabling transactions between sellers (Gram Sabhas) and buyers, and by tracking the delivery jobs that move resources between them.

Examples of resources on VanRozgar

Category	Examples
Medicinal plants	Jadibuti, herbs, roots, bark, Ayurvedic raw material
Forest produce	Honey, mahua flowers, tendu leaves, lac, gum, tamarind, wild fruits and seeds
Handicraft material and products	Bamboo, cane, grass, baskets, mats, tribal crafts
Water and land resources	Water resources, fish, other community-managed resources
Others	Any other natural resource a Gram Sabha manages and can sell or barter sustainably

(The categories above are examples, not a fixed list. More natural resources can be added over time, and new categories can be created from the back-office screen as Gram Sabhas bring in new products.)

---

2. Three Portals and the Delivery Option

VanRozgar has exactly **three login portals**. Delivery is **not** a fourth portal. It is an option inside the main app that a villager can switch on.

Portal	Who uses it	Main goal	What they can do
Gram Sabha	A village forest council managing a CFR area	Sell or barter the village's resources	Add and edit listings, set prices, approve or reject requests, track stock and earnings
Landowner / Villager	A person who owns land under a CFR village	Get resources from other Gram Sabhas	Search and compare listings, send purchase or barter requests, track orders, rate sellers, switch on the delivery option
General Buyer	A person or business with no CFR land (for example, an Ayurvedic brand)	Buy raw material in bulk	Search, compare by distance and price, send purchase requests with a reason for large orders, track orders, rate sellers

All three portals share the same marketplace data. What changes is the home screen, the menu and the actions each role can take.

---

3. Common Screens (Before Login)

Screen 1: Promo page (first page)

A simple welcome page that shows for a few seconds, then moves on by itself.

- VanRozgar logo in the centre
- App name below the logo
- A one-line motto, for example: "Trade resources. Create livelihoods."
- A "Get Started" button, so the user can skip the wait
- Nothing else on this page: no menus, no search

Screen 2: Login and register page

The second page has two clear options:

- **Login:** phone number or email, plus password (or a one-time code sent by SMS)
- **Register:** a "Sign up" button for new users
- "Forgot password" link under the login box

Screen 3: Choose your portal (during register)

A new user picks one of three cards. Each card has a short line of help text.

- **Gram Sabha:** "We manage a CFR village and want to sell or exchange resources"
- **Landowner / Villager:** "I live in or own land in a CFR village and want to buy resources"
- **General Buyer:** "I am a person or business outside CFR villages and want to buy"

There is no fourth card. The delivery option is found later, inside the app.

Screen 4: Register form (changes by portal)

Portal	Details asked at sign up
Gram Sabha	Gram Sabha name, village, district, contact person, phone number, CFR recognition detail, password
Landowner / Villager	Name, village, Gram Sabha they belong to, phone number, password
General Buyer	Name, business name (optional), city, phone number, email, password

A Gram Sabha account is checked by the VanRozgar team before listings go live. This protects buyers and keeps the trust tag honest.

Screen 5: Language choice

The app asks for a language once, on first open: English, Hindi or Marathi. It can be changed later in Settings. Villagers should never need to read English to use the app.

---

4. Gram Sabha Portal

The Gram Sabha portal is for sellers. Bottom menu with five tabs: **Home, My Listings, Requests, Orders, Profile.**

Home (dashboard)

- Summary cards: active listings, new requests waiting, orders in progress, total earnings
- Quick button: "Add new resource"
- A short list of the latest requests

My Listings

A list of everything the Gram Sabha has put up for sale or barter.

- Each card shows photo, resource name, quantity available, price and status (Active, Paused, Sold out)

- Tap a card to edit or pause it

Add or edit a listing

Field	What it is
Resource name and type	For example, jadibuti, honey, bamboo, lac, handicraft, water resource, etc. Pick a category, or choose "Others" and type a new one
Photo	One or more photos of the resource
Quantity and unit	For example, 50 kg or 20 jars
Price per unit	With a "Suggested fair price" shown next to the box
Mode	Sell, barter, or both
If barter	What the Gram Sabha wants in return (for example, water resources)
Source details	Which forest area, how it was collected, to build the trust tag
Pickup or delivery	Whether the buyer collects it or a delivery partner takes it

The suggested fair price is a guide only. The Gram Sabha can always set its own price.

Requests

All purchase and barter requests from other Gram Sabhas, villagers and buyers.

- Each request shows who is asking, what they want, how much, and the reason (for large orders)
- Three actions: **Approve**, **Reject**, or **Counter** (suggest another quantity or price)
- Approving a request creates an order

Orders

- Status for each order: Approved, Delivery partner assigned, On the way, Delivered, Closed
- Delivery details: partner name and phone number
- Tap "Confirm handover" when the goods leave the village

Group selling (inside My Listings)

A Gram Sabha can join a group listing with other small producers of the same resource. Each producer adds their own quantity. The buyer sees one combined listing, and each producer is paid for their own share.

Profile

Gram Sabha details, verification status, ratings received, language setting, logout.

---

5. Landowner / Villager Portal

For people who live in or own land in a CFR village and want resources from other Gram Sabhas. Bottom menu: **Home, Search, My Requests, Orders, Profile.** A "More" menu holds the delivery option.

Home

- A search bar at the top (the main action of the app)
- Quick category buttons: Medicinal plants, Forest produce, Handicrafts, Water resources, Others (more categories can be added over time)
- "Near you" row: listings from the closest Gram Sabhas
- Status of any open request or order

Search and results

The user types what they need, for example "ashwagandha". The results page shows one card per listing.

On each card	Why it is there
Resource name and photo	Quick recognition
Gram Sabha name and trust tag	Shows where it comes from
Distance from the user	Helps pick the nearest source
Price per unit	Helps compare
Rating (stars)	Shows quality from past buyers
Mode badge: Buy, Barter, or both	Shows how it can be obtained

Sort options: nearest first, lowest price first, best rated. Filters: category, price range, quantity available.

Listing detail page

- Photos, description, quantity available, price, Gram Sabha name
- Trust tag details: which forest area, how it was sourced
- Ratings and short reviews

- Two buttons: **Request to buy** and **Offer barter** (shown only if the listing allows it)

Request form

- Quantity wanted and delivery location
- Pickup or delivery choice
- For barter: what the user offers in exchange
- A "Reason for request" box, required when the quantity is large

My Requests and Orders

- Requests: Pending, Approved, Rejected, Counter-offer received
- Orders: status steps from Approved to Delivered, with the delivery partner's name and phone number
- After delivery: "Confirm received" and a star rating with an optional short review

Profile and More menu

Profile details, language, logout. The **"Earn with delivery"** card sits in the More menu (see section 7).

---

6. General Buyer Portal

For outside buyers with no CFR land, such as a person starting an Ayurvedic brand. Bottom menu: **Home, Search, My Requests, Orders, Profile.**

Search, results, listing pages, ratings and order tracking work the same way as in the Landowner / Villager portal. The differences are below.

Area	General Buyer difference
Request form	A reason is required for large orders, such as "raw material for a herbal product line"
Barter	Not offered. Outside buyers purchase only
Home screen	Shows bulk and group listings first, since these buyers often need large quantities
Group listings	Can order from a combined listing of several small producers in one request
Delivery option	Not shown. The delivery option is for villagers
Approval	Large requests are reviewed by the Gram Sabha before they are approved

Why a reason is needed for large orders

A large order can use up a village's stock for the season. The reason lets the Gram Sabha judge the request and protects sustainable harvesting. It also helps the team spot unusual orders.

---

7. Delivery Partner Option

Delivery is not a separate login. A villager already logged in to the main app can switch it on, and switch back at any time.

Where the option appears

- A small card in the More menu and on the Home screen of the Landowner / Villager portal
- Card text: "Have a vehicle? Earn money by delivering resources. Become a delivery partner."
- Tapping it opens a short explainer and a "Start" button

Steps for the villager

1. **Explainer page:** what the work is, how earnings work, what is needed
2. **Registration form:** name, phone number, village, vehicle type (for example, pickup truck, tempo, bike), vehicle number, how much weight it can carry, driving licence detail, areas the driver can cover
3. **Submit:** the status shows "Under review"
4. **Team review:** the VanRozgar team checks the details and approves or rejects, with a reason if rejected
5. **Approved:** a new "My Deliveries" tab appears inside the same app

Only approved partners can see or accept delivery jobs. The team review is done by the VanRozgar team in a back-office tool. It is not a user portal.

Inside "My Deliveries" (after approval)

Screen	What it shows
Available jobs	Orders that need a delivery: pickup village, drop village, goods, weight, distance, pay
Job detail	Contact details of both sides, pickup and drop points, "Accept job" button
Active delivery	Status buttons: Picked up, On the way, Delivered
Earnings	Money earned per delivery and in total
My rating	Average rating from Gram Sabhas and buyers
Availability switch	"I am available" on or off

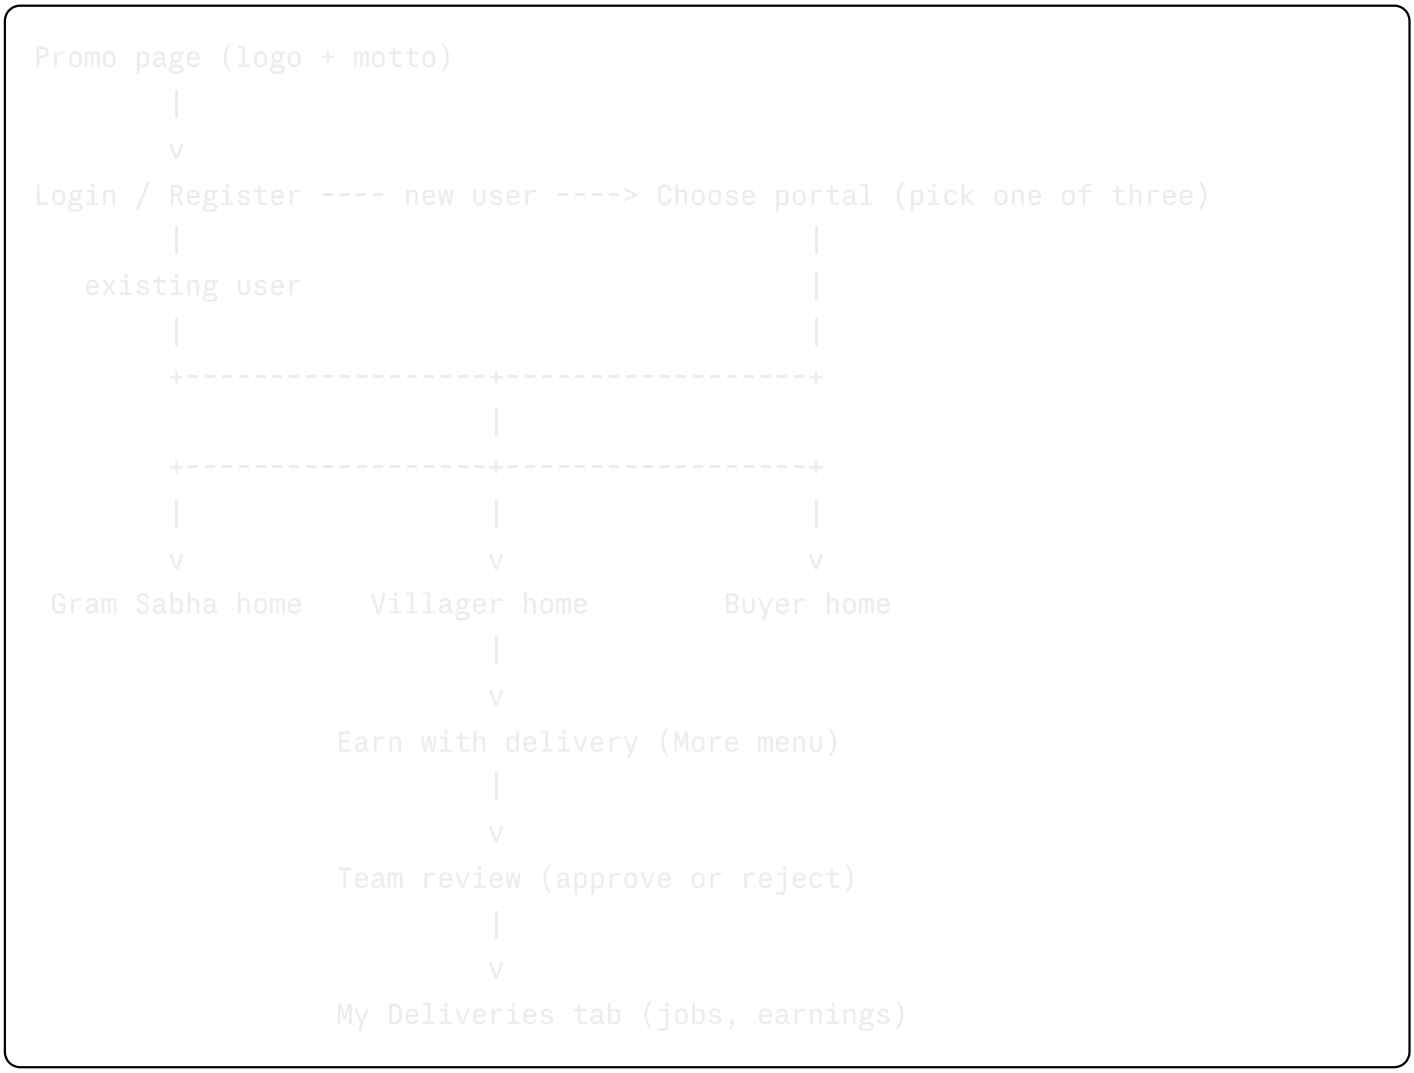

How a delivery works

1. An order is approved by the Gram Sabha and needs delivery
2. Approved partners near the pickup village see it under Available jobs
3. A partner accepts it, and the job is no longer shown to others
4. The partner marks Picked up, On the way, and Delivered
5. The buyer confirms receipt and rates the delivery
6. Earnings and rating are added to the partner's record

Rules to keep it fair

- Unapproved users never see job details
- A partner with poor ratings can be paused by the team after review
- A partner can leave the delivery option at any time without losing their main account

8. App Flow at a Glance

New users register and pick one of three portals. Existing users go straight to their home screen. The delivery option starts from the Villager home and opens a new tab only after the team approves.

---

9. How the Core Features Work

1. Search with distance and price

The user types what they need. The app matches the name and category and shows every active listing.

- Each user's village is saved at sign up. Distance is worked out from the saved village locations
- Results show distance and price side by side on every card
- Sort: nearest first, lowest price first, best rated
- Filters: category, price range, quantity available
- If nothing matches, the screen says so and suggests nearby categories

2. Trust and provenance tag

A small tag on every listing that tells the buyer where the resource really comes from.

- Gram Sabha name and village
- "Verified" mark, given after the VanRozgar team checks the Gram Sabha at sign up
- Source forest area and a short note on how it was collected
- A confirmation by the Gram Sabha that the resource was collected sustainably, ticked when the listing is created

3. Purchase mode and barter mode

Purchase: the buyer sends a request, the Gram Sabha approves, an order is created, and delivery follows. How payment is settled is an open question (see section 14).

Barter: used when two Gram Sabhas each have something the other needs. For example, one village has medicinal plants and the other has water resources.

1. Gram Sabha A opens a listing marked "barter" and taps "Offer barter"
2. A names what it offers and what it wants, with quantities
3. Gram Sabha B sees the suggested fair value of both sides to judge if the swap is balanced
4. B approves, rejects, or counters with different quantities
5. When both agree, one order is created and delivery follows

Barter is for Gram Sabhas and villagers. General Buyers purchase only.

4. Request and approval flow

Every request moves through clear steps, and each step sends the user a notification.

1. **Sent:** the buyer submits quantity, delivery location and (for large orders) a reason
2. **Pending:** waits for the Gram Sabha
3. **Approved, Rejected or Counter-offer:** the Gram Sabha decides. A counter goes back to the buyer to accept or decline
4. **Order created:** stock is held for the buyer
5. **Delivery:** a delivery partner is found, or the buyer collects
6. **Delivered and confirmed:** the buyer confirms receipt
7. **Closed:** a rating is requested and the order is recorded in the impact numbers

5. Fair price suggestion

When a Gram Sabha sets a price, the app shows a suggested range next to the price box.

- The range comes from past sales of the same resource on VanRozgar

- At the start there will be little sales data. The screen then says "Not enough data yet" and the team can add starting ranges
- It is a guide only. The Gram Sabha always sets its own price
- The same suggested value is used to judge barter swaps

6. Group selling

Small producers combine stock of the same resource so buyers can place bulk orders.

- One Gram Sabha starts a group listing, others join and add their own quantity
- The buyer sees one listing with the total quantity and one price
- When the order is delivered, each producer is paid for their own share, based on the quantity they added
- Each producer can see their share and earnings in their Orders tab

7. Quality ratings

- A buyer can rate only after confirming that an order was received, so every rating is tied to a real order
- One star rating (1 to 5) and an optional short review per order
- The buyer also rates the delivery partner separately
- A listing's average rating shows on search cards and on the Gram Sabha's profile

---

10. Why Delivery Matters (Employment Goal)

Moving resources between Gram Sabhas creates paid work for villagers who own a vehicle. This is the core employment motive of VanRozgar.

- Every approved order that needs delivery becomes a job automatically
- Jobs are shown only to approved delivery partners
- Each delivery adds to the partner's earnings and rating
- Delivery numbers feed the Impact dashboard (jobs created, earnings paid)

Open question: how the delivery pay is set (fixed per distance, or agreed per order). This needs a team decision.

---

11. Dashboards

Dashboard	Shown in	What it displays
Gram Sabha dashboard	Gram Sabha portal	Own listings, incoming requests, orders in progress, earnings
Buyer dashboard	Landowner / Villager and General Buyer portals	Open requests, order status, past purchases
My Deliveries	Inside the main app, after delivery approval	Available jobs, active delivery, earnings, rating
Impact dashboard	Team and presentation use	Total earnings, jobs created, families benefited

There are still only three login portals. "My Deliveries" is a tab that appears for approved delivery partners, not a separate login. The Impact dashboard is for the team, for presentations, funding pitches and award applications.

---

12. Group Selling and Impact Tracking

Group selling lets several small producers holding the same resource pool their stock into one larger listing. A buyer who needs a bulk quantity (for example, 50 kg of a herb) can place one order against the combined listing, and the payment is split fairly across each contributing producer.

Impact tracking rolls up platform activity into clear numbers: total earnings paid to villagers, number of delivery jobs created, and number of families benefited. These numbers feed the Impact dashboard and are the project's key evidence for funders, NGOs and award applications.

---

13. Implementation Flow and Tech Approach

Order flow

Gram Sabha lists resource -> Buyer searches by distance and price -> Buyer sends request or barter offer -> Gram Sabha approves order -> Approved driver is assigned -> Delivery completed (rating and earnings logged) -> Impact dashboard updates totals.

Tech approach

One mobile app holds all three portals. The app talks to a backend that handles listings, requests, approvals, orders and delivery matching. A database stores everything below. This

follows the same pattern as the team's other CFR modules.

Data	What it holds
Users	Name, phone, portal type, village, language
Gram Sabhas	Name, village, verification status, ratings
Listings	Resource, photos, quantity, price, mode, trust details
Requests	Who asked, quantity, reason, status
Orders	Linked request, stock held, delivery status
Delivery partners	Vehicle details, approval status, availability
Deliveries	Order, partner, pickup and drop, status times
Ratings	Order, stars, short review
Earnings	Gram Sabha sales and delivery partner pay

The VanRozgar team also needs a simple back-office screen to verify Gram Sabhas and review delivery partner registrations. It is used only by the team and is not a login portal for users.

---

14. Open Questions

- [ ] How is payment handled: online, cash on delivery, or settled by the team?
- [ ] How is delivery pay set: fixed by distance, or agreed per order?
- [ ] Should the delivery option show only in the Landowner / Villager portal (current plan), or in the Gram Sabha portal too?
- [ ] Languages at launch: English, Hindi and Marathi. Is that right?
- [ ] Should the app work offline in low-network villages, and sync later?
- [ ] Which resource categories should be live at launch, and who adds new ones later (the team, or Gram Sabhas with team approval)?
